BAuA-Nr.: N-94019 (Germany)

EINECS (European Union)

REACH (European Union)

BPR (European Union)

Quality product made in Germany.  
Highest standards and sustainable supply guaranteed.

## FAQ Frequently Asked Questions:

**What differentiates this product from other products on the market?**

viraPROTECT® Plus hand sanitiser is the only liquid, alcohol-free hand sanitiser certified by the Association for Applied Hygiene (VAH) adhering to the recommendations of the Robert Koch Institute for the use of disinfectants in hospitals. This proves a significantly higher quality standard than all other alcohol-free hand disinfectants.

**Which advantages do I get by using this product?**

viraPROTECT® Plus hand sanitiser combines the quality of a hand disinfection according to the medical standards of the Robert Koch Institute with the skin and user friendliness of an alcohol-free hand disinfection.

If you have skin problems due to the use of alcoholic disinfectant products, or if you do not want to use alcoholic disinfectants for other reasons (e.g., because of the associated fire and environmental risks or for ethical and religious reasons) but still do not want to forgo a product of medical quality, then viraPROTECT® Plus hand sanitiser is the product of choice for you.

**Is the product flammable or classified as dangerous good?**

viraPROTECT® Plus hand sanitiser is non-flammable and not classified as dangerous good for transport, storage or use. Its ingredients are outstandingly biodegradable.

**Which quality standards does the product meet? Which standards do comparable products meet?**

viraPROTECT® Plus hand sanitiser is the only liquid, alcohol-free hand disinfection certified by the Association for Applied Hygiene (VAH) adhering to the recommendations of the Robert Koch Institute for the use of disinfectants in hospitals. It therefore meets a significantly higher quality standard than all other alcohol-free hand sanitisers.

Comparative products are often not tested at all or only laboratory tested with so-called „suspension tests“. At best, however, these tests provide limited information about whether the product is also suitable for practical use in hand disinfection. Like the Robert Koch Institute, we are convinced that the reliability of a product can only be guaranteed beyond doubt if it is VAH certified.

**Can the products be transferred into other containers/refilled?**

Unlike alcoholic disinfectants, transferring viraPROTECT® Plus Hand sanitiser can be refilled without issue. Since the product is broadband effective and sporicidal, no relevant contamination will occur during the transfer process. Hence, we are also able to offer environmentally friendly refill packs and large containers for self-bottling by bulk buyers.
